01 Executive Summary

The purpose of this document is to provide a central location detailing what each Landmark & Argyll reports contain.

This information is designed to be used on search providers platforms. Each report is consistently explained using the following subheadings:

- Content
- Includes
- Other Considerations
- When to use
- Turnaround Time
- Price Bands
- Service

02 Residential Environmental Reports

Homecheck Residential

Content

Homecheck Residential provides a contaminated land liability risk assessment under Part 2A of the Environmental Protection Act (1990). Alongside this, the report provides a full assessment for ground stability and radon as well as an alert assessment, where relevant to the property, for flood risk, coal mining, planning and energy & infrastructure and which will prompt you to investigate further.

Includes

Professional Opinion:

- Contaminated land liability assessment for Part 2A of the Environmental Protection Act (1990) that meets the needs of the Law Society's Contaminated Land Practice Note. It also includes Landmark's innovative and ever expanding 'Risk Assessed Land Register' dataset to provide more passes early on.

Full Assessment:

- Ground Stability - Provides a full assessment of ground stability and subsidence data, negating the need for a follow-on report.
- Radon - An assessment of whether Radon could be an issue in the location

Alert Assessment:

- Flood Risk - A high-level summary of any flood hazards to prompt whether to investigate further.
- Coal Risk - A market-first, 'No search' certificate. Alongside and integral to the Coal Screening Data Layer is Landmark's certification as to the result's accuracy, where 'No' or 'Low' risk is identified. Landmark's certification is backed by a £1M indemnity policy.
- Planning – an alert assessment making you aware of potential changes to the surrounding environment that may impact intrinsic enjoyment of the property. In addition you will receive information on Planning constraints.
- Energy & Infrastructure – an assessment to determine if energy and infrastructure developments could impact the property, and to prompt further investigation.

Other Considerations

- Contaminated land, excess free remediation contribution of £100,000
- Free re-review service

When to use

For Residential transactions when requiring a Professional Opinion assessment of contaminated land as well as considerations of other environmental risks. This overview helps determine if more in-depth analysis is necessary and whether a supplementary report is needed.

Turnaround Time - 1-2 working days

Price Bands - Polygon up to 2ha

Envirosearch Residential

Content

Envirosearch is Landmark's core environmental risk report. It provides a contaminated land liability risk assessment under Part 2A of the Environmental Protection Act (1990). Alongside this the report provides full assessments of data to confirm whether flood risk, energy & infrastructure projects, ground stability or radon could also be an issue at the property. This report now also comes equipped with the newly added climate change module. It also includes alert assessments to determine if coal mining and planning applications could affect the property.

Includes

Professional Opinion:

- Contaminated land liability assessment for Part 2A of the EPA providing a clear report conclusion of Passed or Further Action. Including Landmark's innovative and ever expanding 'Risk Assessed Land Register' dataset to provide more passes early on

Full Assessment:

- Flood Risk: An assessment of Landmark's comprehensive suite of flood data to identify whether flooding could affect the property.
- Climate change: a comprehensive assessment of key data sets to understand future risk from both physical & transition risk
- Ground Stability: Full assessment of our ground stability and subsidence data, negating the need for a follow-on report
- Radon: An assessment of whether Radon could be an issue in the location
- Energy & Infrastructure: Full assessment of our energy and infrastructure development data, negating the need for a follow-on report

Alert Assessment:

- Coal risk - A market-first, 'No search' certificate. Alongside and integral to the Coal Screening Data Layer is Landmark's certification as to the result's accuracy, where 'No' or 'Low' risk is identified. Landmark's certification is backed by a £1M indemnity policy.
- Planning – alert assessment making you aware of potential changes to the surrounding environment that may impact intrinsic enjoyment of the property. In addition you will receive information on planning constraints.

Other Considerations

- Contaminated land, excess free remediation contribution of £150,000
- Free re-review service

When to use

For Residential transactions when requiring a professional opinion on contaminated land as well as more detailed assessment and evaluation of other environmental risks, including the newly added climate change information. Perfect for when certainty is needed.

Turnaround Time - 1-2 working days

RiskView Residential

Content

Riskview Residential is an All-In-One report that delivers its users with comprehensive environmental due diligence. It provides both a contaminated land liability risk assessment under Part 2A of the Environmental Protection Act (1990) as well as a flood risk assessment, which is reviewed by an Argyll Consultant if a high risk is identified. As it is all encompassing, it also provides a full review of ground stability, including coal, radon, energy and infrastructure projects and planning information.

Includes

Professional Opinion

- Contaminated land liability assessment with 'Professional Opinion' for Part 2A of the EPA. Providing a clear report conclusion of Passed or Further Action to copy into the report on title. Includes Landmark's innovative and ever expanding 'Risk Assessed Land Register' dataset to provide more passes early on
- Flood Risk - A clear report conclusion of Passed, Passed Moderate or Further Action with a 'Professional Opinion' to copy into the report on title. Assessment includes all key sources of flooding, flood defences as well as proximity to and elevation above historic flood events and watercourses. The result is scrutinised by an Environmental Consultant if a high risk is identified

Full Assessment:

- Ground Stability: A detailed ground stability, subsidence and mining assessment to identify if a risk could exist, eliminating the need for a follow-on report.
- Climate change: a comprehensive assessment of key data sets to understand future risk from both physical & transition risk.
- Landmark's, market-first, coal alert providing certification as to the results accuracy, where 'no' or 'low' risk is identified (backed by an in perpetuity £1m indemnity policy) and a full Landmark Coal report where necessary.
- Radon: An assessment of whether Radon could be an issue in the location
- Energy & Infrastructure: A detailed review of a wide variety of energy or transport projects contained within our Energy & Infrastructure Report. Search radius up to 4km search radius
- Planning: A review of core planning application data for the property and in the immediate surrounding area including planning constraints and local authority planning strategies which may affect the new owner's ability to make certain changes to the property. Inc. large applications as polygons for the majority of the Great Britain.

Other Considerations

- Contaminated land, excess free remediation contribution of **£250,000** – the market's highest
- Free re-review service
- Flood Insurability Statement

When to use

For residential transactions where you require the most comprehensive due diligence and expert analysis on all key environmental risks including climate change. Delivering the highest level of accuracy and evaluation.

SiteSolutions Residence

Content

The Argyll SiteSolutions Residence report is a fully consultant led contaminated land and flood risk assessment. Every risk opinion is provided by an Environmental Consultant following a review of data and historic mapping. This approach ensures a reliable and accurate assessment of contaminated land and flood risk. The report also covers ground stability, mining, radon and energy & infrastructure projects.

Includes

Colour coded front-page summary with imbedded hyperlinks for fast and efficient report navigation and risk understanding

Contaminated Land

- Contaminated land liability assessment for Part 2A of the EPA backed by £10m PI
- Risk assessment for the potential presence of contamination on and off site.
- Detailed manual review of historic maps and environmental data for every report
- Fully interpretive report with clear and concise risk assessment and summary, flexible to whether development is proposed or not
- Expert assessment provided by Environmental Consultants

Flood Risk

- Detailed manual review of a comprehensive suite of flood risk data
- Discussion of risk provided by Environmental Consultants
- Clear and concise risk assessment and summary
- Recommendation and advice tailored to significance and mechanism of risk
- Insurance availability assessment
- Undefended and defended risk assessment provided
- Assessment of what action would be required if the Site were to be redeveloped under the National Planning Policy Framework (NPPF)

Other Considerations

- Ground Stability: A detailed ground stability, subsidence and mining screen including claims data to identify if a risk could exist
- Coalfield consultation area alert
- Radon: An assessment of whether Radon could be an issue in the location
- Energy & Infrastructure: A detailed review of a wide variety of energy or transport projects including above and below ground railways data. Search radius of 2km or 4km dependent upon the potential visual intrusiveness of a project, or property location (urban or rural)

Assessment

Manual contaminated land and flood risk assessment provided by environmental consultants that meets and exceeds the Law Society's Contaminated Land and Flood Risk Practice Notes.

When to use

A residential transaction when requiring either, a detailed contaminated land and flood risk assessment, or if you require comprehensive environmental due diligence. Suitable for a redevelopment of a single residential property.

03 Residential Ancillary reports

Landmark Flood

Content

Landmark Flood is a detailed flood risk assessment. The assessment is derived following a review of a comprehensive suite of flood data extending beyond the four main sources of flooding including historic flood events, the river network and the elevation and proximity of the Site in relation to these features. If a 'High Risk' is indicated by flood data, an Environmental Consultant at Argyll will review the risk to ensure the overall assessment is accurate.

Includes

Flood Risk

- Assessment includes all key sources of flooding as well as proximity to and elevation above historic flood* events and watercourses. Backed by £10m PI
- Market leading assessment as data is scrutinised by an Environmental Consultant if a high risk is identified
- Sophisticated flood risk model including undefended and defended risk
- A clear report conclusion of Passed or Further Action and a 'Professional Opinion' to copy into the report on title.
- Insurability statement

*Data from Environment Agency and Natural resources Wales only - not available in Scotland

Assessment

Flood risk assessment that meets the needs of the Law Society's Flood Risk Practice Notes. If high risk, an Argyll consultant will review the data.

When to use

Any residential transaction where flood risk requires proper investigation.

SiteSolutions Energy & Infrastructure

Content

The Energy & Infrastructure report provides accurate and detailed information on a variety of new energy sources and major transport projects that could have an impact upon the value, or a purchaser's enjoyment of a property. Suitable for both residential and commercial transactions, the report intelligently searches out to varying distances dependent upon the project type so not to identify projects unnecessarily. The results of the search are provided on a very clear and easy to use front page with non-technical assessment at the front of the report.

Includes

- Energy & Infrastructure Projects
- HS2 track and infrastructure (searched to either 2km-4km)
- Crossrail 1 & 2 (searched to 2km)
- Energy exploration inc. licence blocks and wells (searched to 4km)
- Wind Farms and turbines (searched to 4km)
- Solar Farms (searched to 2km)
- Renewable Energy Plants including: Anaerobic Digestion; Biomass; Co-firing (biomass with fossil fuels); Heat Pumps; Hot Dry Rocks (HDR); Landfill Gas; Municipal Solid Waste Combustion; Sewage Sludge Digestion (searched to 4km)
- Above and below ground rail lines inc. underground/metro networks (searched to 2km)
- Southampton to London Pipeline Project

NB. The search radius of 250m, 2km or 4km is dependent upon the potential visual intrusiveness of a project, or property location (urban or rural).

Assessment

Clear front-page summary specifying what projects have been identified within the respective search radii

When to use

Landmark Planning

Content

Landmark Planning provides unrivalled data accuracy through Planning Applications as Polygons, covering most of the UK. The polygons, provide a footprint for the development which is a much more accurate representation of a developments potential impact on an area. Less time is required analysing applications to understand their extent and impact.

Results of the report are clearly displayed on the easy to use, front page summary. The report looks out to varying distances based on development size so not to identify projects unnecessarily.

Landmark Planning also provides essential planning and development strategy information to homebuyers and current homeowners in mainland Great Britain. It supports the homebuyer in making an informed decision by supplying quality information for the property and surrounding area.

Includes

- Clear front-page summary identifying what applications have been identified
- Planning applications data looking within the last 7 years to inform of nearby current or future developments.
- Large Applications as Polygons for much of the UK for quicker interpretation
- **Daily updates** to the planning data to provide the most current view of planning across Great Britain
- Commercial and residential applications separated by development size
- Land use designations as set out in the Local Plan

Assessment

Clear front-page summary specifying what applications have been identified within the respective search radii. Supported by mapping in the report

04 Residential Coal Reports

Landmark Coal Residential

Content

The Landmark Coal residential report in collaboration with mining experts Pinpoint is a Regulated, CON29M compliant Coal Report.

The report provides property-specific information relating to past, current and future underground and surface coal mining activities, providing detailed response to all 11 key questions recommended by the Law Society Guidance Note (2018). The report includes unique analysis by Pinpoint to assess the 'Zone of influence' from underground workings that could have affected the property. Relevant for all mainland Great Britain.

When relevant, the report will also include a Mine Entry Interpretive Assessment and/or Subsidence Claim Interpretive Assessment.

The report includes a clear colour coded front-page action summary identify where a risk could exist. Detailed professional opinions are contained within the relevant sections of the report, in response to specific issues set out by the Law Society.

Includes

- Assessment complaint with Law Society Guidance Note (2018)
- Underground Coal Mining (past, present or future)
- Opencast Coal Mining (past, present or future)
- Unique technical risk model that scientifically assesses the zone of influence as required by the law society CON29M.
- Mine Entries (Interpretive Mine Entry Assessment when relevant)
- Mining Geology
- Mine Gas
- Mining Subsidence Claims (Interpretive Subsidence Claim Assessment when relevant)
- Surface Hazard Call Out Incidents
- Wider BGS Recorded Mineral Mining
- Provided with an Accuracy Certificate backed by £1m Indemnity

Assessment

Clear front-page summary as well as a detailed professional opinion when a risk has been identified in the data. Guaranteed quality assessment from industry expert at Pinpoint

When to use

A residential transaction when a property has been identified within an area where a coal mining report, compliant with the Law Society Guidance Note (2018) should be obtained

Landmark Climate Change Report - Residential

Content

An informative desktop report, designed to show the potential impact that climate change could have at a property when required to disclose. Landmark Climate Change report provides an overview of predicted future risk using a data baseline from UKCP18, the most authoritative UK climate projection data

Includes

- A polygon search functionality, which allows for finer granularity and precision in reporting. Suitable for every transaction.
- Presents short, medium, and long-term climate-based risks visually through maps & graphics.
- An intuitive format providing clear explanation as well as advice and recommendations
- It includes potential changes to physical risk that may impact the property. These physical risks are listed below. The report also reviews energy performance, which is a key transitional risk for property to adapt to as the UK transitions to a low-carbon economy.
- Each section includes recommendations and advice to help the property lawyer discharge their duty when disclosing on potential future climate risks.

Physical Risks:

- Flood - Overall risk includes river, coastal and surface water flooding.
- Ground Stability - Natural subsidence risk
- Heat Stress
- Coastal Erosion

Transitional Risk: Energy Performance -

- Current Property EPC rating: Confirms if the property has an EPC, its validity, rating and when it was last inspected.
- Potential rating: Confirms what the properties potential rating, and a modelled estimate of cost to achieve rating
- Multiple EPC's shown where relevant to the property

Other Considerations

Report introduces the topic of climate change and why it is important to help the property lawyer discharge their duty.

When to use

During a residential property transaction where the property lawyer has been instructed to disclose on potential future climate risks.

Turnaround Time - 1-2 working days

05 Commercial Environmental Reports

SiteCheck Assess

Content

Sitecheck Assess is Landmark's core commercial environmental risk report. It provides a contaminated land liability risk assessment under Part 2A of the Environmental Protection Act. Alongside this the report provides screens to indicate whether flood risk or energy & infrastructure projects could be an issue at the property. If identified, a report providing a risk assessment is recommended. The report also covers radon and potential environmental constraints.

Includes

- Contaminated land liability assessment backed by £10m PI
- Clear report conclusion of Passed or Further Action and a 'Professional Opinion' to copy into the report on title.
- Landmarks innovate and ever expanding 'Risk Assessed Land Register' dataset to provide more passes early on.
- Free re-review service

Other Considerations

- Flood Risk Screen: A risk screen of a suite of flood data to identify whether a FloodSolutions

Commercial Report should be ordered

- Radon: An assessment of whether Radon could be an issue in the location
- Energy & Infrastructure Screen: A screen of data included within the Argyll Energy & Infrastructure report to identify whether a report should be ordered
- Environmental Constraints information

Assessment

Contaminated land liability assessment that meets the needs of the Law Society's Contaminated Land Practice Note. Risk Screens of other environmental issues to identify whether other reports should be ordered.

When to use

A commercial transaction when only requiring a contaminated land liability assessment, where there is no planned development or change of use.

SiteCheck Combined

Content

The Sitecheck Combined report provides a contaminated land liability assessment for Part 2A of the Environmental Protection Act as well as a flood risk assessment. Where a high flood risk may exist, the property will be reviewed by a consultant for an expert opinion. The report also covers radon and potential environmental constraints.

Includes

Contaminated Land

- Contaminated land liability assessment backed by £10m PI
- A clear report conclusion of Passed or Further Action and a 'Professional Opinion' to copy into the report on title.
- Landmarks innovate and ever expanding 'Risk Assessed Land Register' dataset to provide more passes early on.
- Free re-review service

Flood Risk

- Market leading assessment as data is scrutinised by a consultant if a high risk is identified
- Accurate assessment and more 'Passed Assessments'
- Assessment includes all key sources of flooding as well as proximity to and elevation above historic flood events and watercourses.
- Sophisticated flood risk model including undefended and defended risk
- A clear report conclusion of Passed or Further Action and a 'Professional Opinion' to copy into the report on title.
- Insurability Statement

Other Considerations

- Radon: An assessment of whether Radon could be an issue in the location
- Environmental Constraints information

Assessment

Contaminated land liability and flood risk assessment that meets the needs of the Law Society's Contaminated Land and Flood Risk Practice Notes.

When to use

A commercial transaction when you require an understanding of risk for both contaminated land and flood risk, where there is no planned development or change of use.

SiteSolutions Commercial

Content

SiteSolutions Commercial is the only standalone commercial contaminated land risk assessment which is always provided by an Environmental Consultant. The Consultant will scrutinise all the historical maps and data to provide a robust and accurate assessment. The report provides both a liability assessment under Part 2A of the Environmental Protection Act and a risk assessment looking at the potential presence of contamination on and off site.

Includes

Contaminated Land

- Detailed manual review of historic maps and environmental data by an Environmental Consultant for every report
- Contaminated land liability assessment for Part 2A of the EPA backed by £10m PI
- Risk assessment for the potential presence of contamination on and off site
- Suitable for development as liability assessment includes the planning regime
- Executive summary providing top level assessment as well as fully written site analysis by the Consultant
- Recommendations flexible to the transaction

Other Considerations

- Ground Stability: A detailed ground stability, subsidence and mining screen to identify if a risk could exist
- Radon: An assessment of whether Radon could be an issue in the location
- Environmental Compliance: Confirm if an Environmental Permit is held at the Site
- COMAH: Confirm if a COMAH site is within 500m
- Property Considerations: discussing issues such as asbestos, EPC, Interceptors and tanks

Assessment

Manual contaminated land and flood risk assessment provided by environmental consultants that meets and exceeds the Law Society's Contaminated Land and Flood Risk Practice Notes.

When to use

A commercial transaction when an expert risk assessment is required beyond the requirements of the Law Society Practice Note. Recommended: Acquisitions, Investments & Development/Change of Use.

SiteSolutions Inspect

Content

The Site Solutions Inspect provides a comprehensive contaminated land assessment that includes an Environmental Audit of the property. The Inspect provides a professional interpretation of potential contamination risks and Part 2A liability. Understanding the risk of operations and any environmental compliance requirements of a site can be key especially for industrial land uses as if not upheld, there could be enforcements.

Includes

Contaminated Land

- Detailed review of historic maps and environmental data
- Obtaining key information from either Environmental Health, Planning Department, Petroleum Licensing and/or the Environment Agency
- Consultant professional opinion of potential Part 2A liabilities
- Environmental Audit carried by an IEMA accredited Environmental Consultant to review operational management and where relevant, compliance with an environmental permit.
- Clear and concise risk summary
- Expert assessment by IEMA accredited professionals

Assessment

Fully interpretive report with non-technical executive summary of risk, Part 2A liability assessment, review of site management and bespoke recommendations where applicable.

When to use

Industrial land uses (including garages/petrol stations, transport depots) and sites with Environmental Permits.

Turnaround Time

10-15 working days (can take up to 20, dependent upon Local Authority response times). Site visit will need to be arranged.
